

Tableau User Story | Sales Performance

Introduction

This user story outlines the specifications for building two dashboard using Tableau to help stakeholders, including sales managers and executives to analyse sales performance and customers.

Sales Dashboard | Requirements

Dashboard Purpose

The purpose of the sales dashboard is to present an overview of the sales metrics and trends in order to analyse the year-over-year sales performance and understand sales trends.

Key Requirements

KPI Overview

Display a summary of the total sales, profits, and quantity for the current year and the previous year

Sales Trends

- Present the data for each KPI on a monthly basis for the current year and the previous year.
- Identify months with the highest and the lowest months.

Product Subcategory Comparison

- Compare sales performance by different products subcategory for the current year and the previous year.
- Include a comparison of the sales with profit.

Weekly Trends for Sales & Profits

- Present weekly sales and the profit data for the current year.
- Display the average weekly sales.
- Highlight weeks that are above and below the average to draw attention for sale & profits performance.

Customer Dashboard | Requirements

Dashboard Purpose

The customer dashboard aims to provide an overview of customer data, trends, and behaviours. It will help the marketing team and management to understand the customer segments and improve customer satisfaction.

Key Requirements

KPI Overview

Display a summary of total number of customers, total sales per customers and total numbers of orders for the current year and previous year.

Customer Trends

- Present the data for the KPI on a monthly basis for both the current and the previous year.
- Identify months with highest and lowest sales and make them easy to recognise.

Customer Distribution by Numbers of Orders

Represent the distribution of customer based on the number of orders they have placed to provide insights into customer behaviour, loyalty and engagement.

Top 10 Customers by Profit

- Present the top 10 customers who have generated the highest profits for the company.
- Show additional information like rank, number of orders, current sales, current profits and the last order date.

Design & Interactivity Requirements

Dashboard Dynamics

- The Dashboard should allow the users to check historical data by offering them the flexibility to select any desired year.
- Provide users with the ability to navigate between the dashboard easily.
- Make the charts and graphs interactive, enabling users to filter data using the charts.

Data Filters

Allow users to filter data by products information like category and subcategory and by location like region, state, and city.
